If the result is positive

Now you know that, as of today, your government and personal retirement income is greater than your expenses. Therefore, you're able to save and probably shouldn't have to withdraw from your personal savings unless there are changes in your income or expenses (lower income, higher expenses, inflation, etc.)

If the amount is negative

Your current expenses exceed your income. This negative amount gives you a good approximation of the amount you'd have to withdraw from your personal investments to maintain your desired lifestyle. Your financial planner can use this information to give you valuable financial projections on your personal situation and recommend the solution best adapted to your situation.
