Indexation Methodology

As of the date of this Investor Report, the Guarantor uses the methodology described below (which methodology is, as of the date hereof, the "Indexation Methodology"), to establish the current market loan to value ratios ("LTV ratio") of residential properties securing loans included in the Covered Bond Portfolio on a quarterly basis for purposes of the Asset Coverage Test, the Amortization Test, the Valuation Calculation and for other purposes as may be required by the CMHC Guide from time to time. Changes to the Indexation Methodology may only be made

(i) upon notice to CMHC and satisfaction of any other conditions specified by CMHC in relation thereto,
(ii) if such change constitutes a material change, subject to Rating Agency Confirmation, and
(iii) if such change is materially prejudicial to the Covered Bondholders, subject to the consent of the Bond Trustee.

The Indexation Methodology must at all times comply with the requirements of the CMHC Guide. The index used by the Guarantor to determine the updated market value of a Property is the Teranet-National Bank Regional and Property Type Sub-IndicesTM ("TNB RPTSIs"). The TNB RPTSIs product is available by subscription at www.housepriceindex.ca. This website and its contents do not form part of this Investor Report.
The TNB RPTSIs product is an independent representation of the rate of change of Canadian single-family home prices. The measurements are based on the property records of public land registries, grouped into individual Forward Sortation Areas (or clusters of FSAs). At this time all Properties in the Covered Bond Portfolio are located in FSAs covered by the TNB RPTSIs. Sub-indices are further segmented by property type (all types vs. single-detached homes vs. condominiums) in areas where this data is available. For areas where the TNB RPTSIs are not subdivided by property type, the Guarantor will use the all types sub-index. All properties that have been sold at least twice are considered in the calculation of the TNB RPTSIs; this is known as the repeat sales methodology. Properties that are affected by endogenous factors are not considered in the estimation. These factors may include:

a) nonarms-length sale,
b) change of type of property, for example after renovations,
c) data error, and
d) high turnover frequency (biannual or higher).

In the repeat sales methodology, the averaging of price appreciation from different pairs of sales is done using an estimation process in which each pair is a separate observation. For purposes of the Covered Bond Portfolio, each Property is assigned an original index value based on its appraisal date or re-evaluation date, if more recent information is available. On at least a quarterly basis, the latest index value for a Property is compared to the original index value. The relative change is used to calculate an updated market value. This market value is used as the denominator in the current market LTV ratio.

Material risks associated with using the Indexation Methodology include, but are not limited to, the following: the accuracy, adequacy and timeliness of the TNB RPTSIs being relied upon; the consistency in underlying methodology of such TNB RPTSIs; the continued availability of the home sale price data provided to Teranet; and in the case of Properties located within the areas where the TNB RPTSIs are not subdivided by property type, the risk that the all-types sub-index may not account for differences in property value changes based on property type.Teranet Inc. ("Teranet") has, jointly with National Bank of Canada ("NBC", and collectively with Teranet and their third party licensors, the "Licensors"), developed a methodology and algorithm to create a residential house price index. The Fédération des caisses Desjardins du Québec Legislative Covered Bond Programme (the "Programme") is not endorsed, sold or promoted by the Licensors. None of the Licensors make any representation or warranty, express or implied, to the parties to the Programme or any member of the public regarding the advisability or recommendation of investing in the Programme particularly or concerning the results to be obtained from the TNB RPTSIs and the ability of such product to track the performance of the residential real estate and housing markets or concerning the extent to which the capital value or income return of the Programme matches or will match the performance of the TNB RPTSIs or the levels at which the TNB RPTSIs may stand at a particular date. The Licensors' only relationship to Fédération des caisses Desjardins du Québec ("FCDQ") is the licensing of certain trademarks and trade names of the Licensors without regard to the FCDQ or the Programme. The Licensors have no obligation to take the needs of the FCDQ or the parties to the Programme into consideration in determining, composing or calculating the TNB RPTSIs. None of the Licensors is responsible for and none has participated in determining the pricing, quantities or timing of the execution of the Programme by the parties thereto or the assessment or method of settlement calculation therefor. The Licensors have no obligation or liability in connection with the administration, marketing or trading of the Programme.

Summary of the Principal Documents – Interest Rate Swap Agreement / Summary of the Principal Documents – Covered Bond Swap Agreement

The Issuer, in its capacity as Interest Rate Swap Provider, and the Guarantor have entered into an Interest Rate Swap Agreement that provides the Guarantor with a hedge against possible variances in the rates of interest payable to the Guarantor on the Portfolio Assets (which may, for instance, include variable rates of interest or fixed rates of interest) following the Interest Rate Swap Effective Date, and the amount (if any) payable in respect of its obligations under the Intercompany Loan and, following the Covered Bond Swap Effective Date, the Covered Bond Swap Agreement. The interest rate swap confirmation is not yet effective and cashflows are not being exchanged pursuant thereto. The obligations under the interest rate swap confirmation are contingent and will only become effective on the Interest Rate Swap Effective Date. Further details can be found in the interest rate swap confirmation. The Issuer may be required to post collateral to secure its obligations under the Interest Rate Swap Agreement upon the activation of rating triggers. These rating triggers have not been activated and no collateral has been posted yet. Further details can be found in the Base Prospectus in the section entitled "Summary of the Principal Documents – Interest Rate Swap Agreement" with the downgrade rating triggers described within that section under "Interest Rate Swap Early Termination Event".

The Issuer, in its capacity as Covered Bond Swap Provider, and the Guarantor have entered into Covered Bond Swap Agreements that provide the Guarantor with a hedge against currency and/or other risks arising, following the occurrence of the Covered Bond Swap Effective Date, in respect of amounts received by the Guarantor under the Interest Rate Swap Agreement and amounts payable in respect of its obligations under the Covered Bond Guarantee. The parties have entered into a separate swap confirmation for each outstanding Series of Covered Bonds. The obligations under the covered bond swap confirmations are contingent and will only become effective on the Covered Bond Swap Effective Date. Further details can be found in the covered bond swap confirmation in respect of a trade, which will be available once posted on the Issuer's covered bond website following completion of the trade https://www.desjardins.com/ca/about-us/investor-relations/fixed-income-investors/ccd-covered-bonds-terms-access/index.jsp None of these confirmations is effective and cashflows are not being exchanged pursuant thereto. Maturity Structure
Covered bonds can be issued on any term with soft bullet maturities (extendable for an additional year from contractual maturity date). Issuers must prescribe ratings triggers for (a) establishment of a cash reserve fund sufficient to satisfy interest and Guarantor's senior payment obligations for a period prescribed by the issuer and (b) pre-maturity tests designed to ensure covered bond collateral includes cash to satisfy all principal payments under hard bullet bonds maturing during a prescribed period and all senior payment obligations during that prescribed period. Following an issuer event of default, the Guarantor will be required to perform a monthly amortization test to confirm that value of covered bond collateral is at least equal to the outstanding principal amount of covered bonds.

Extension Triggers and Extended Due Dates
All outstanding Series are soft bullets. An Extended Due for Payment Date twelve months after the Final Maturity Date has been specified in the Final Terms of each such Series. The Interest Rate specified in this report in respect of each Series applies until the Final Maturity Date of that Series following which the floating rate of interest specified in the Final Terms of each Series is payable monthly in arrears for the interest period from and including the Final Maturity Date to but excluding the Extended Due for Payment Date. This means that, if the Issuer fails to pay the Final Redemption Amount of a series of Covered Bonds on the Final Maturity Date (subject to applicable grace periods) and the Guarantor has insufficient moneys available in accordance with the Priorities of Payments to pay in full the Guaranteed Amounts corresponding to the Final Redemption Amount, then payment of the unpaid amount pursuant to the Covered Bond Guarantee will be automatically deferred and will be due and payable on the Extended Due for Payment Date specified in the applicable Final Terms. To the extent it has available funds, the Guarantor will be required to make partial payments of amounts remaining unpaid on each Interest Payment Date up to and including the Extended Due for Payment Date.
