

TELUS Health Managed Drug Formulary

LIST OF ALTERNATIVES

The TELUS Health managed drug formulary promotes the use of clinically proven and cost-effective treatments.

- First-tier drugs are the preferred options and have the highest reimbursement percentage.
- All other drugs covered under the plan would receive the lowest reimbursement percentage.

The list below shows the most commonly prescribed medications and is not exhaustive.

Please note:

- Drugs that can be prescribed in different concentrations or formulations may be listed in more than one tier if one version is considered to be more clinically optimal or cost-effective than another.
- This document should not replace the advice of your healthcare professional.

The choice of which medications to prescribe is between you and your healthcare professional. Occasionally, a prescribed drug will not be eligible under your plan; however, a therapeutic alternative that provides a similar benefit may be included on the formulary. By reviewing your options with your healthcare professional, they can, when appropriate, prescribe a drug that qualifies as an eligible expense. If you have any questions or want to confirm coverage of specific drugs, please contact our Client Relation Centre at 1-800-263-1810.
