

Desjardins
International Development

PROFESSIONAL EXPERIENCE

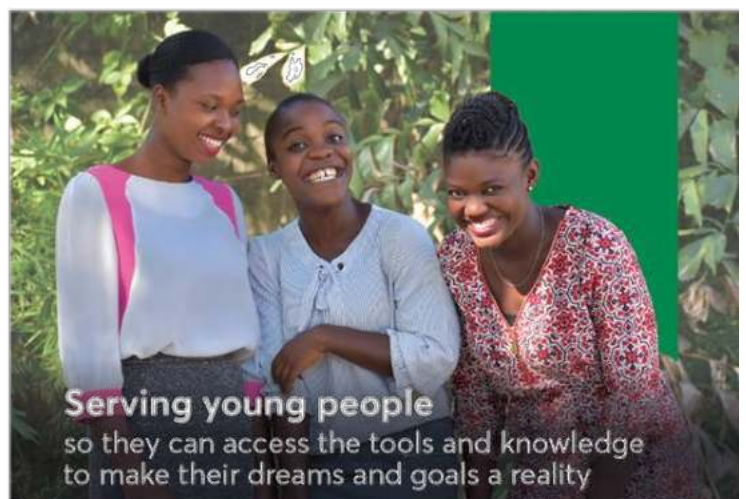

Nearly 700 technical assistance initiatives and investments in 65 countries

Through our initiatives, we make finance a driver of inclusive and sustainable development

For the past 50 years, Développement International Desjardins (DID) has worked to boost the economic autonomy of disadvantaged populations living in developing and emerging countries. How? By promoting financial inclusion and education in order to create sustainable economic opportunities and empower people.

Based on our experience, access to financial services is crucial for development, as a lifeline for reducing inequality, promoting food security, sustaining economic growth, combating climate change – in short, it's essential for improving living conditions for all.

DID has a team of nearly 200 people, including some 100 local experts, and is a component of Desjardins Group, which is recognized as a socio-economic leader in Quebec and Canada.

votes:

- Generalized Gauss's Law: $\oint_C \mathbf{A} \cdot d\mathbf{s} = \int_V \nabla \cdot \mathbf{A} \, dV$ can be derived from Gauss's Theorem: $\nabla \cdot (\mathbf{A} \delta V) = \delta V \nabla \cdot \mathbf{A} + \mathbf{A} \cdot \delta \mathbf{S}$ and the limit $\delta V \rightarrow 0$.
- The δV element is not only a volume, but has a surface δS . The more surface, the more $\mathbf{A} \cdot \delta \mathbf{S}$ and the more $\delta V \nabla \cdot \mathbf{A}$. Here $\delta V \nabla \cdot \mathbf{A}$ is the analog of the volume integral, and $\mathbf{A} \cdot \delta \mathbf{S}$ is the surface integral.
- So the δV and δS are different elements of space. In δS , the volume integral goes to zero, but the surface integral does not. In δV , the surface integral goes to zero, but the volume integral does not.

MULTI-CONTINENT			
Project starting place on more than a continent (e.g. transatlantic)
