

ECONOMIC NEWS

Quebec-Ontario: Demographics are shaping the labour market

HIGHLIGHTS

- ▶ Quebec recorded a loss of 3,800 jobs in April, after an increase of 2,400 in the previous month.
- The unemployment rate climbed from 6.4% in March to 6.6% in April.
- ▶ Ontario saw a pullback of 1,600 jobs last month.
- ▶ A sharp decline in the labour force brought the unemployment rate down to 5.8% in April, the lowest it has been since January 2001.
- ▶ According to the 2016 Census, the population segment aged 15 to 64 is going down in Quebec whereas it still going up in Ontario and in Canada as a whole.

COMMENTS

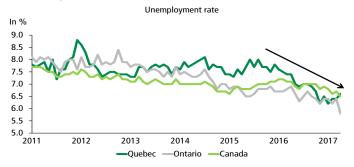

Demographic trends are influencing the labour market beyond the variable monthly statistics for employment and unemployment rate. Quebec's particular age structure has meant a drop in the number of people aged 15 to 64 for some years.

The dynamics are different in Ontario and in Canada as a whole, since the working age population continues to grow. These demographics mean that the unemployment rate in Quebec has gone down more rapidly than elsewhere in the country since 2015, despite a similar growth in employment.

IMPLICATIONS

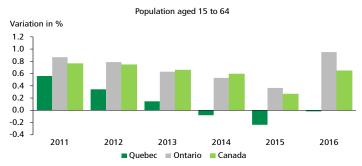

We should not be worried about the slight job losses recorded in April. The trend over several months is upwards, and the real GDP figures published recently point to strong economic growth for both provinces. Despite some blips, the unemployment rate is very low in Quebec. For some years now, declining demographics in the province are exerting additional downward pressure on the unemployment rate. This is a

structural rather than a situational factor, and it will not change in coming years.
